

# OPERATION IMPACT

Understanding the role that cannabis plays both recreationally and medically is very complex. The scientific community agrees there is a lot we do not know. Strength has increased dramatically. Perception of both benefits and risks tend to be exaggerated. The science and ramifications of 21st century marijuana has changed.

Leaders in the field of behavioral health have designed an education program to help participants make fact-based decisions about personal use of marijuana. Critical thinking skills can help decipher the barrage of information available and to use this information in opinion forming and decision making processes

## Course Highlights:

- Acute and prolonged effects of marijuana use
- The impacts of marijuana on the teenage brain and the neurotransmitter system
  - The difference between Marijuana, Synthetic Marijuana, Hemp and various marijuana alternatives
  - The troublesome new statistics concerning addiction, particularly among teens & young adults
  - Explain human Opioid Receptors, Opioid analgesia and compare this to the Human Endocannabinoid system
    - Summarize the side effects of drug-to-drug interactions
    - Cannabis and mental health consequences

This program is offered in several formats.

## Who Should Attend?

- People who are court-mandated, or those who are pre-trial with a possession or DUI.
  - Teens, young adults, parents.
  - Medical marijuana patients.
  - Those looking to become clean or reduce use.
